Was very clear": "medicated powder we found one fiber of chrysotile"; Shower to Shower .we feel stronglythat it may be chrysotile .chrysotile is very low", >>> Final Report >>> "Shower to Shower The fiber content of Shower to Shower is quite low in comparison to previous samples which we have investigated. We found three suspect fibers. Of these, two were found in one field and probably have the same source, very possibly contamination. It is still questionable whether they are chrysotile. We have, however, found traces of chrysotile in G 11 one of the additives to Shower to Shower, and this might be a possible source of these contaminant fibers."		Dete: 11-575 MLG, CSR, RPR, CRR

	McCrone								The Shower to Shower appeared to have a few more fibers than the other two samples ,however I think that might be due to possible contamination from the G-11 in the G-11 we did find two positively identified chrysotile fibers and some other fibers which at first glance peeared to be chrysotile, when you look at the electron diffraction pattern. I believe that most the fibers in Showen to Shower which are suspecting come from G-11. I left out the comments on G-11 from the report because I felt you might want to change your supplier or investigate your supplier , and this would only	of.
